

EDGEWATCH

SECURITY INTELLIGENCE

Find your **weaknesses**,
protect your **edges**

» Discover. Protect. Comply.

Tailored for MSPs, loved by customers.

Edgework's all-in-one Attack Surface Management Platform provides real-time insights into external vulnerabilities, threat intelligence, and the regulatory compliance landscape. It assists companies in discovering, monitoring, and analyzing devices accessible from the Internet.

Exposure Insights

View a comprehensive summary of asset discovery including scans, organizational ASM/EASM/SET assessments, discovered assets, vulnerabilities, and data breaches.

Assets Analysis

Examine the impact on each asset with a detailed inventory, including ASN, IP blocks, and addresses. Mark false positives and assess the associated risks.

Breach intelligence

Access data breach information from open sources and the dark web, revealing affected users and internal users with compromised credentials.

Vulnerability Sorting

Contextualize findings to manage vulnerabilities effectively by categorizing assets like organizations, subsidiaries, domains, and more.

False Positive Filtering

Navigate through alerts efficiently by marking non-relevant findings as false positives or archive them for record-keeping.

Risk Evaluation

Analyze vulnerabilities and assess risks with precision to understand the security stance and prioritize responses.

AI-Enhanced Automation & Integration

Optimize your cybersecurity with our extensible API, seamlessly integrating into your systems. Edgework delivers real-time insights, threat intelligence, and a robust, AI-powered compliance engine that includes Europe's diverse local regulations, enhancing device monitoring and analysis.

Designed with Compliance in Mind

Edgewartch provides comprehensive compliance support covering international standards such as ISO 27001, European regulations like GDPR, upcoming CRA, and local implementations such as Germany's IT-Grundschutz, the Netherlands' BIR, and Spain's ENS. It is designed to help organizations navigate the complex landscape of information security regulations, ensuring they meet both global and local requirements.

Transform Your Managed Services

Join the forefront of cybersecurity with Edgewartch. Provide your clients with continuous security monitoring and compliance reporting under your own brand for free, offering unparalleled protection and peace of mind.

Increase
19%

Companies increasing visibility of their assets

By 2026, Gartner expects that 20% of companies will have 95% or greater visibility of their assets, an increase from less than 1% of companies in 2022

Growth
16,3%

Compound annual growth rate (CAGR)

By 2025, Frost & Sullivan expects the vulnerability management market to reach \$2.51 billion.

WHY SHOULD YOU PARTNER WITH US?

Increase business opportunities

Our Partnership Program will add value to your existing solutions, help you attract new business, and increase upselling opportunities within your customer base. With Edgewartch as part of your offerings, you can deliver additional services and create recurring revenue opportunities.

Less resources, more results

We are already scanning the whole internet every few days with hundreds of servers in charge. Let us share the data to improve your customers' safety. Our skilled team includes security analysts and penetration testers that can help you cater to a larger customer base without adding more resources.

Scans for everyone

Go ahead, breach the gap and start offering cybersecurity reports for free to your customers. No more unaffordable bloatware for small businesses. We only charge for advanced scans that will require dedicated compute resources.

Edgewartch performs continuous scans of all public IP addresses and domain names across the internet, revealing a unique digital footprint and offering an external perspective of the global online infrastructure.

The Edgewartch Attack Surface Management Platform assists companies to discover, monitor, and analyze Internet-accessible devices, reducing their exposure and enhancing their cybersecurity measures.

Ready to elevate your managed services?
