

Boost your company's cybersecurity with ease

NordPass is an advanced yet easy-to-use password manager developed by the team behind NordVPN.

It empowers today's organizations to protect their sensitive information effectively by giving them full control over who can access — and share access to — company resources.

NordPass also serves as a cybersecurity monitoring tool that informs businesses about data breaches and password vulnerabilities so they can mitigate such risks before they escalate.

“ It saves time and allows us to focus on our daily operations. For any business looking for a way to securely manage passwords in a user-friendly way, NordPass is a necessary tool.

– Philippe Hannes,
Infrastructure and Data Protection Officer

Discover how NordPass meets your cybersecurity needs

Ensuring the safety of company data while enabling fast access

- Unlimited encrypted storage for passwords, passkeys, notes, and payment information
- The zero-knowledge architecture ensures that access to data remains exclusively private
- Ultra-secure XChaCha20 encryption algorithm that protects data from unauthorized access
- The autofill feature allows one-click logins, quick payments, and fast form completion

Being able to share of company credentials securely

- Secure sharing of credentials, credit card details, and notes with individuals and groups
- Customizable sharing permissions for providing specific employees with different access rights
- Encrypted folders for sharing multiple items at the same time

Facilitating compliance with robust security protocols

- Company-wide settings for enforcing sound password policies, enabling auto-lock on devices with public access, disabling outside sharing, and more
- Multi-factor authentication for enhanced user identity verification
- A built-in authenticator for adding two-factor authentication (2FA) to business accounts stored in NordPass
- Password Generator for creating unique and complex passwords that are in line with company policy

Monitoring the company's security and preventing data leaks

- Data Breach Scanner monitors the web for compromised payment information, emails, and company domains
- Activity Log provides insights into account activity, item sharing, changes to company settings, and more
- Password Health identifies weak, old, and re-used passwords in the organization
- Public API allows real-time capture of end-user actions for monitoring and alerting

Integrating the password manager into the existing IT infrastructure

- Seamless integration with Google Workspace, Entra ID, MS ADFS, and Okta
- Synchronization across Windows, macOS, iOS, Android, and Linux devices

Centralizing access management

- Streamlined on – and offboarding with simplified user controls for granting and revoking access
- Effortless transfer of access permissions among team members

Choose a plan that’s right for you
